

From "Live today" to "Be alive in the future".
Through our "Learn, Create, Live" activities, we improve the quality of life of people in Mozambique.

Organization Name

NGO Bridge for Lives in Mozambique Association in Mozambique: PVM
 (Progresso para Viver em Mocambique)

Concept

We introduce and take in the "knowledge and wisdom" necessary for people to survive in poor areas in Mozambique, and support each and every one of us to solve the problems on our own, through the cooperation of Japan and other countries.

We will strive to improve quality of life, including food and health, education, and the environment. It also contributes to the improvement of the dignity of life for people living in the same world.

 Kitakyushu-city, FUKUOKA, JAPAN
- Secretariat in Mozambique
 Rua sem saida, Bairro de Natite, PEMBA,
 Cabo Delgado, MOZAMBIQUE

Education Fostering intellectual curiosity and creativity
Private free school TERAKOYA

In slum areas, there are many children who don't have parents and they can't go to school. In order to improve the chain of non-education and to raise children's intellectual curiosity, we regularly conduct children's educational activities at Terakoya and the secretariat.

Music classes are the most popular!

We made a guitar by my self!!

Painting TERAKOYA walls

English

Arithmetic

Sanitation Reduce infant mortality and cholera morbidity
Wells and toilets and water supply infrastructure

It is difficult to obtain safe water in Cabo Delgado. In villages that don't have a water distribution system and/or toilets, we construct pit toilets and install rope-pumped wells and water infrastructure. We also provide training on water environment improvement and focus on human resource development.

Before our activities, Rural water sources were shared by animals and humans

Construction of water supply infrastructure

Our original rope-pumped well that can be maintained by the user

Construction of water supply infrastructure

Irrigation and organic farming

Solving environment and nutrition Problems

Environment Public health and nutrition, new project
A hub for improvement of QOL COMERTO

Since 2019, we have started the construction and operation of "COMERTO", which is a place to improve the local environment, public health, and nutrition issues together with residents. In addition to conventional activities such as beautification, seedling and raising of highly nutritious plants moringa, and organic farming in rural areas, we are also engaged in health management, feeding of poorly-fed children, and drilling wells in areas where bedrock is hard and can't be dug by hand.
